What went well?

AG

"Ramesh joined Capgemini in October 2025 as a Full Stack Developer and has made significant progress and contributions to the WBD Studio Economics Title Project.

1. Code Audit & Modernization :He conducted a comprehensive audit of Application code (Spring Boot 3 backend and Angular UI) codebases, identifying 20+ areas for improvement.
2. Codebase Cleanup & Standardization :
He led a major cleanup initiative, including:
 - Refactoring 100% of backend endpoints to REST standards. Adding 150+ meaningful logs and user messages.
 - Removing 10+ redundant API calls from the UI.
 - Fixing 100% of UI and backend unit test cases, including previously missing controller-level tests.
3. Selenium + Cucumber Automation Setup : He implemented a robust automation framework using Selenium + Cucumber and Developed 20+ test cases across critical pages.
 - Created 10+ reusable configs and roles.
 - Enabled both smoke and full regression suite execution.
 - Documented the setup in Confluence and conducted a walkthrough session attended by the entire team.
4. UI Code Refactoring & Localization Prep
He refactored 200+ hardcoded variables and labels into constants and message files, enabling future localization. He also:
 - Removed 15+ unnecessary API calls.
 - Strengthened authentication and authorization flows.
 - Documented the new UI structure, improving consistency and reducing onboarding time for UI developers.
5. Design token and Spartan UI Component Development
He built 10+ reusable wrapper components (e.g., input fields, dropdowns, tabs) using Spartan UI and Tailwind CSS v4. His work enabled non-full-stack developers to complete their stories 30% faster, improving overall sprint velocity.
- 6 SAML + Okta Integration POC
He successfully completed a POC for SAML + Okta integration:
 - Configured Okta with the architect and IDP team.
 - Implemented redirection to Okta login and SAML response parsing.
 - Generated JWT tokens and documented the flow.

Ramesh modernized the Spring Boot and Angular codebases, fixing 100% of unit tests, removing 25+ redundant API calls, and adding 150+ meaningful logs, improving code quality and maintainability. He implemented Selenium+Cucumber automation with 20+ test cases and reusable configs, enabling full regression and smoke suites, reducing manual testing effort by 40%. Additionally, his UI refactoring and Spartan component development accelerated story completion by 30%, while successfully delivering a SAML+Okta POC for secure authentication."

What could I improve on?

AG

"He needs to plan to complete at least one AWS certification. He also needs to complete a Capgemini internal certification, either Level 0 or Level 1 Industrial certification."
