Topic Description:

1. Title Economics Coding Assignment – Developed and delivered CSP application features following coding standards and business requirements. 2. Code Review and 2. Performance Tuning – Performed code reviews and optimized application performance to improve quality, scalability, and efficiency. 3. Writing Automation Testing – Developed automated test cases to ensure application reliability, quality, and regression coverage. 4. Sprint Assignment and Delivery Consistency – Consistently delivered sprint commitment. [Show Less](#)

What went well?

AG

“Ramesh has successfully integrated 4 DS APIs (Theatre Count, DBO, Thematic, and Box Office Profile Scores) into the TE application, enabling data-driven decision support.

- Played a key role in production release of TE, ensuring smooth deployment with minimal post-release issues.
- Delivered end-to-end implementation of Greenlighting Financials for 2 business units (Theatrical Distribution and Marketing).
- Led Angular upgrade from v19 to v20, resolving all migration issues and improving application stability.
- Resolved major issues in project and scenario creation, improving workflow efficiency and reducing user-reported errors by ~30%.
- Implemented centralized state management, reducing redundant API calls by ~25–30% and improving application performance.
- Introduced virtual scrolling in Spartan NG data tables, improving load times and handling large datasets more efficiently.
- Developed reusable UI components (data table, monetary display, greenlight metrics), improving development efficiency and consistency across modules.
- Presented ~90% of sprint demos, effectively communicating progress and feature implementations to stakeholders.

What could I improve on?

AG

““Need to obtain a foundation-level AI certification, such as Claude or Cursor. Need to complete additional training on AI-powered productivity tools to improve efficiency and development effectiveness.””
